Auto Spare Wheel Kit

- Wheel Crack Replacement THANK YOU FOR ALL YOUR SUPPORT.... ITS LOOKS LIKE MY LIFE IN FIAT FRANZIA IS OVER. I have a 97 wan60p with bad front suspension. I have replaced all the struts and not happy with their work. After a lot of research and reading, I found out that my front spares need to be replaced and hence I had to go in search of a very good replacement.

The Auto Spare Wheel Kit has more alloy wheel for my model. Furthermore, it fits well in the wheel arch, and there are no sharp edges in the alloy wheel. I am also quite sure that it will bring the same look and feel as the stock steel alloy wheel. So, I eagerly purchased it, and now I can say thanks to our great distributor and customer support team for sending me the Auto Spare Wheel Kit. Most

Importantly I am happy that I will not have to take the car to a mechanic because I just replace the front part and I am ready to hit the road with my car. Parth & Kapil from India

Product Weighed? It comes with 2 wheel kits (1st, 2nd and 3rd sizes) and the kit is made in Europe. I am sure the same set of wheels in Asia would cost a lot more. Customer Reviews

Quick and reliable service WE sent an

email regarding a spare wheel for a car. We were told that we will need to visit their showroom. After the visit, the man told us that he will send the wheel on the same day by taking 3-4 days for delivery (thanks to the amazing international shipping of their products) The wheel fitted perfectly in our car and we can clearly say that the wheel that they gave us is better than the factory spare wheel. I

can definitely recommend the service and would recommend it to everyone
Product Weighed? Definitely to read through their reviews I wanted a more robust and strong alloy wheel for my Fiat Punto Evo 14. It was a replacement wheel. The purchase was easy and I was given best quality wheel

password.Q: Weird behavior with `html()` and `innerText` in IE So, what is happening in this code is weird. Firstly, it works fine in all browsers I've tested except IE8. My assumption is that it has something to do with `innerText` not updating properly in IE 8. Secondly, it works in IE8 when I do it manually with `document.getElementByIdByClass('class').innerText = true;` The only solution I have come up with is

this var currentElement = document.g
etElementByClass('js-active-overlay');
currentElement.setAttribute('innerTe
xt', 'true'); I'd like to avoid using the
setAttribute() function because I
could use one less call to
getElementByClass() A: try this, \$(
