AmpShell features a simple, customizable interface that allows you to add games to a list and set the settings as you wish. Also, the settings can be accessed within an external editor, which allows you to make adjustments to the application without restarting it. You can even add your own configuration file if you want to enable special settings for particular games.

AmpShell Features:

- Create a list of your favorite games, arrange them in categories
- Add games from multiple locations
- Customize the

settings of DOSBox You can easily adjust the setup for individual games Make major changes to the configuration file without restarting AmpShell Allows you to run games with special settings LiteWeight Feature: The package does not include DOSBox, so you will have to download and install it separately. Features: .NET: A powerful component-based architecture Fully compatible with Windows XP and Windows 7 C#, VB, C++, and F# syntax Supports multiple projects in a single solution Supports IDE integration, remote debugging, and

profiling Achievements, test frameworks, profiling, and logging
Dependency Injection Framework (DI) .NET language extensions: dynamic and multicore profiling, expression-bodied members, lambda-style extensions, etc. Web server support: A RESTful API for consuming .NET runtime information
Multicore and concurrency support
Support for asynchronous programming
Support for projects with multiple solution, and projects within the solution
Use of modern C# features including reflection, generics, and asynchronous

programming Lightweight Windows
Forms and WPF support Generics
support Performance profiler for
Windows XP Compatible with
Windows XP, Vista, and 7 Supports
DirectX 9 and OpenGL Easy
installation on multiple operating
systems Support for .NET Framework
2.0, 3.0, 3.5, 4.0, and 4.5 Fully
supports Unicode Easy to learn, learn-
fast LiteWeight Development The
package is very lightweight in terms
of size and resources and can be
installed in just a couple of minutes,
no matter whether you are running
Windows XP, Vista or Windows 7. It

is compatible with 32-bit and 64-bit versions of Windows and supports the .NET Framework 2.0, 3.0, 3.5

KeyMover Macro script creator
DESCRIPTION: KeyMover is a powerful yet easy to use tool that allows you to quickly create macros that will change your keyboard's input. KeyMover is written in Visual Basic.NET, and works with Windows Vista and Windows XP, and all versions of Windows Me, 2000, 98SE, NT 4, 2000, 95, 95 SE, 98, and

all other Windows OS's. KeyMover is very easy to use; there are no complicated steps to get started. KeyMover can easily learn and remember your keystroke patterns. Your keystrokes become ingrained in the software. KeyMover will remain consistent for the life of the program. KeyMover can use any built in Windows OS application, such as Notepad, Explorer, Explorer, Explorer, MS Word, and Excel to make macros with. It can also use other external applications that have built-in keystroke macros such as MS Word, or MS Excel. KeyMover also

has a built-in Windows Control Panel keystroke macro editor, so you can easily add macros to your own computer using the built in control panel without having to pay for a third-party application.

KEYSTROKE TYPES: Keystroke macros can be either Single Key, Modifier Key, or Multiple Key.

Single Key: - Uses one keystroke to accomplish one task. Modifier Key: - Uses a keystroke combination to accomplish one task. Multiple Key: - Uses multiple keystrokes to accomplish one task. Here are a list of many of the features of KeyMover: -

Create macros for a single keystroke.
- Create macros for a modifier key. -
Create macros for multiple
keystrokes. - Automatically add a
modifier key to the keystroke macro.
- Automatically add a modifier key to
the keystroke macros. - Automatically
create a "TAB" keystroke macro. -
Automatically create a "ENTER"
keystroke macro. - Automatically
create a "BACK" keystroke macro. -
Automatically create a "CTRL"
keystroke macro. - Automatically
create a "SHIFT" keystroke macro. -
Automatically create a "ALT"
keystroke macro. - Automatically

create a "COMMAND" keystroke
macro. - Automatically create a
"WIN" keystroke macro. -
Automatically create a "CT

1. Field of the Invention The present
invention relates to a capacitor

structure and an electronic apparatus including the same. 2. Description of the Related Art Recently, with an increase in operating speed of electronic apparatuses such as a mobile phone or a smartphone, the need for a capacitor with a lower ESR (Equivalent Series Resistance) and a larger capacity, a smaller size, and a smaller thickness has increased. One of such capacitors is a spiral-wound type capacitor (see Japanese Laid-Open Patent Publication No. 2010-232938). A capacitor including a spiral-wound structure formed by winding a sheet-shaped metal foil

layer around a dielectric layer and a counter electrode layer has a lower ESR than an electrode layer having a tab structure formed by bonding a metal foil layer to a dielectric layer and a counter electrode layer with a bonding layer (see Japanese Laid-Open Patent Publication No. H8-329433). Therefore, the capacitor may be applicable to high-frequency devices and miniaturized devices. When a sheet-shaped metal foil layer is used, the metal foil layer and the dielectric layer may easily separate. To suppress the separation of the metal foil layer and the dielectric

layer, it is preferable to form a resin layer on the surface of the metal foil layer. This invention relates to a mechanical power transmission and, more particularly, to a clutch device for a mechanical power transmission having a structure which permits an accurate setting of the amount of power transmission between an input shaft and an output shaft in a high torque region. Generally, there are a mechanical clutch device and an electronic clutch device for a mechanical power transmission. In the conventional mechanical clutch device, a clutch device for use in an
