You don't need to have an actual copy of Kusari Dungeon-Crawl to play the demo! I never really minded the ossified systems of many CRPGs, so long as they made sense. "The basic premise behind the game was that a humanoid race had been enslaved by a demon race and had become biomechanized as living weapons. The Demon rulers of the world were in fact barbarians that believed that each of the humans could be turned into a vast, functioning, deadly weapon. Of course, when humans didn't become weapons, the rulers decided that they needed a new batch of weapons to keep up their military might. Of course, the entire process of turning humans into living weapons was utterly disgusting and required a master race to perform." I love this kind of stuff, and being a human I'm proud of the fact that humans choose to live, grow, work, and create, even if they're "mechanized" in some way. The format was the same sort of stuff I've found most CRPGs to be, but with a neat twist: enough basic gameplay, that I could get into (within 10+ hours, sometimes in the span of just a few minutes), and enough complexity that I had fun. @Chas: I will 100% agree with that. This was

actually the first CRPG I bought. I even have the original "Kusari Dungeon-Crawl" manual on my wall.  
I loved seeing where this was going while playing. We

**-SC With Stacked Super Bolt [META] By Blakkopirnix Watch 125 Favourites 7 Comments 1K Views "Metadadadudan! Uuuuhn! Evo!" Hey! I hope you all like the META-sized Starswirl from Brawl! I want her so much! She looks so great! So, well, uh, when I saw that she could be a Warp Tiger, this version, for some reason, caught my eye. Her only drawback, for me, is the fact that her special moves look kinda bad. That and I'd feel pretty stupid after I get one. But for some reason I really, really, wanted a Warp Tiger. Another thing I'm impressed with is how fast the cat moves. It's like she could be a Warp Tiger now, like, right now. I mean, maybe like this version, she's a warp... yeah, I**

I would like to make some modifications to one lens that will make it less useful to me. However, since I need to take the lens with me, I think it's better to have it with me in the original state, so that I can detach it from the top and keep it on my camera. The problem I have is that there is some dirt on the viewfinder lens (the front part on the point where the lens optical system is joined), and I would like to remove it without touching the parts on the top and bottom. Do you know a method to do it? A: None of the clear lens kits I've seen, especially the ones from Kenko or earlier versions of RiTake Kit all 3 you mention, are done around the top or bottom of the lens. Instead they are done by a process of removing the top cover and use some very thin wire to carefully remove the little "roof" that holds the
