How to present your first demo without being annoying, like other people Every software developer must have their first real customer, who will take one to one or more functional or technical requirements, proposals, and present them to management or to a client. At this point, it is also important to have a demo that works for both technical and business users so that you can be convincing in your next proposal. When you present your first demo, avoid the following mistakes: Do not get carried away with it This is one of the first mistakes that you will make. You can become a bit desperate to finally show your app in action and it could end up taking a turn to become embarrassing to all parties involved. Is it just you who can make your first demo? Demonstration doesn't necessarily mean that your software will be available to the world. The most useful thing is to know that your functional and technical requirements for this first demo have to do with the real needs of the audience, not with your needs. Sit comfortably and be confident Everything will work if you make the effort, but it's more comfortable when you are confident. If you are talking to an audience, they are not used to your gestures or interactions. They do not know how you interact with your mobile phone or your keyboard, so they won't be expecting you to do the same. IOC Secretary General Edward Downie called Mr Bloomberg's victory at the 64th IOC Session in Lima, Peru, after a long battle which ended in a last-minute decision by the IOC Executive Board to abandon an election which would have required a secret ballot. "The IOC Executive Board and the IOC Technical Commission can congratulate Michael Bloomberg and his vice president Erik de Zeeuw," Mr Downie said. He also congratulated the 17 member National Olympic Committees for their efforts in electing the duo as the new IOC president and the first IOC vice president. Mr Bloomberg and Mr de Zeeuw will both take office on 1 September. The new IOC president will replace Jacques Rogge, whose tenure will expire at the end of this month. Mr Bloomberg is currently the CEO of the financial company Bloomberg L.P, which as recently as 2004 was considered one of the highest-earning Fortune 500 companies. The mayor of New York and a native of New Jersey is chairman of the board of directors of the company, which owns the highly successful Bloomberg Businessweek magazine. Mr Bloomberg's first term as mayor was marked by his campaign to extend the subway to parts of the city not yet reached, a subway that made him a vocal critic of former NYC Mayor Rudy Giuliani. He also raised eyebrows as a candidate for the Democratic presidential nomination in 1999 and 2000, when he focused some of his campaign on reducing smoking and excessive drinking.1. Recently, scanners are widely spread and become popular, and scanners are connected to personal computers and workstations to be used as image processing devices, respectively. Further, in the field of documents, a printer, serving as a scanner, is widely used as a companion device of a copier, replacing an original document scanning device. This printer includes not only a copying function, but also image data reading function. However, since the memory capacity of a conventional small capacity memory card is small, the image data may possibly overflow when the memory card is used as a memory media to store image data. Further, reading the image data from the memory card is also accompanied with a problem. That is, when the amount of image data exceeds the capacity
